

Blockchains Start to Creep into the Dental World

DENTACOIN

Dentacoin is the first Blockchain based informatics system to make its way into the dental community. Is it actually useful?

- It's an Ethereum based system that allows patients to provide feedback to dental providers and vice versa.
- Founded by a finance market expert, a law and economics and business expert and a developer. Prof. Dr. Dimitar Dimitrakiev, Philipp Grenzebach, Jeremias Grenzebach. Based out of Munich.
- As stated in the whitepaper:
 - *The basic idea is to provide and maintain a decentralized review platform based on Ethereum smart contracts.*
 - *This website rewards high quality "patient reviews" and "market research surveys" with Dentacoin.*
 - *The Dentacoin Foundation recognizes that the value of all user contributions (reviews, recommendations, rewards, payments, trusted feedback, etc.) is one of the most important assets to the foundation. A single review is worth next to nothing, but millions of trusted and impartial reviews are worth many millions (or possibly even billions) of euros. Individuals should be paid for everything they do that brings value not only to Dentacoin but also to the dental industry.*
- Each review earns the reviewer credits.
- A verified patient's review gains more credits than an anonymous review.
- Why is there a need for this to be decentralized?
- Had a successful ICO in July 2017.
- No app available for download on App Store yet.
